Enhanced Summary Care Records

The NHS *Summary Care Record* (SCR) is an electronic summary of key clinical information (including medicines, allergies and adverse reactions) about a patient, sourced from the GP record. It is used by authorised healthcare professionals, with the patient's consent, to support their care and treatment.

Fill in a consent form at your surgery so additional information can be added and you can decide what you would like healthcare professionals to see. It may be that you are a carer or have specific needs regarding your long term health condition.

For further help or information please visit your GP practice.

Care Navigation

Receptionists and clerical staff are now trained to help patients by identifying the most appropriate place or health clinician for your care.

Care navigation is about getting you the right advice and the right service. This is often quicker than waiting to see the GP and staff may even be able to advise of another service which could see you straightaway. Working in this way helps to free up time for GPs to care for patients with complex or serious health conditions that can only be managed by the GP. More importantly though, it means people are first seen by the clinician that is best placed to manage their clinical problem.
